

St. Forchern's Restoration Works

Protected Structure ref: CW 449 NIAI 10302303

A Chara,

Kirwan Conservation from Kilbranish have commenced works over the last week in St Forcherns Church with both the interior and exterior scaffolding works complete. The removal of the old plaster around the alter area has commenced and thankfully no new water ingress has been identified so far. This means the exterior repointing work in 2017 has solved the historic issues within the alter area. The removal of the old plaster and prep work will take this week while initial plastering works will commence next week.

Fund raising is progressing and thank you for those who have donated already, we understand it's a challenging time for everyone and your support is greatly appreciated.
